**LAYING UP CABLES IN WATER SURROUNDINGS AND TERRAINS  
WHERE FOR SAFETY REASONS AS A SOLUTION THERE IS LYING  
UP OF THE CABLES WITHOUT SURFACE DIGING**

**ABSTRACT**

In the theme is presented the method of laying up the cables under the rivers, with use of the method of underground digging and forming a canal through which will be laid up plastic pipes which serve for pulling in the cables. This method can be used also in case of laying up the cables in towns to avoid digging up of the streets. The concrete example is given at laying up cables under the river Sava in Belgrade. Grouping of cables and the method of laying up is unique and it is used for the first time in this occasion. Except the used method, in the concrete occasion of laying up cables under the river Sava, other alternative methods were presented which were used until now as a possible solutions for laying up the cables, not only in occasions under rivers, but also in the city areas.
