TREATMENT OF POWER SYSTEM SECURITY PROBLEMS

ABSTRACT

Power system liberalization and deregulation processes lead to the new treatment of power system security problems. In principle, it can be said that the balance of security and economics has a tendency to economy in recent years, although power system security itself finally is an economic category. In this paper a short review on always important problems of power system security is being given, including the chapter dealing with Macedonian Power system security.

Keywords: Power system, security, system operator.
